

INSTALLING THE DLI LOGGER SERVICE VER. 3.7.x

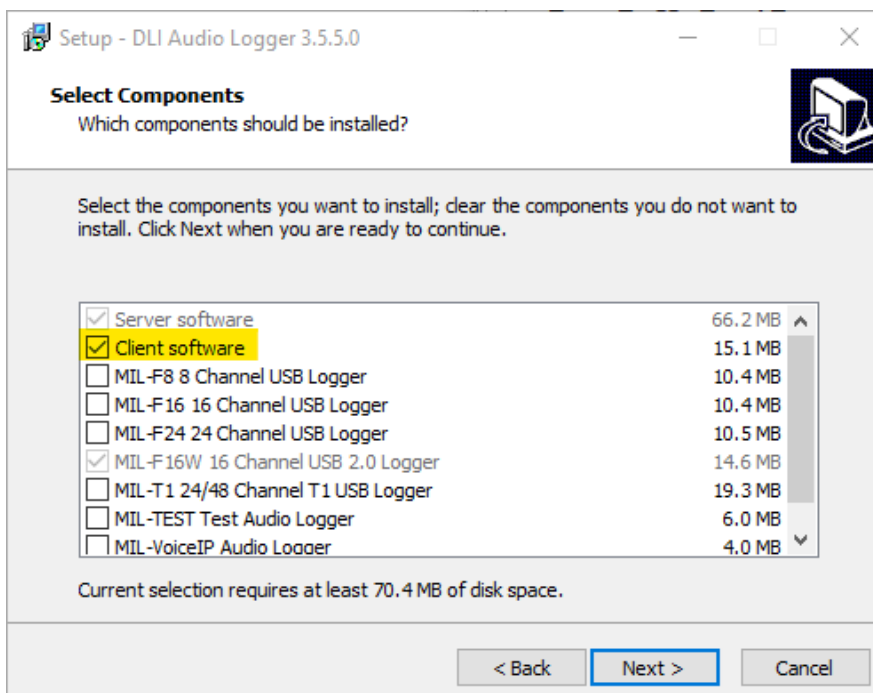

Connect the logger before installing the software.

Install the Service software:

Select model of logger to install. *Note the F16 and F16W are different models. The F16W has an LCD in the front.

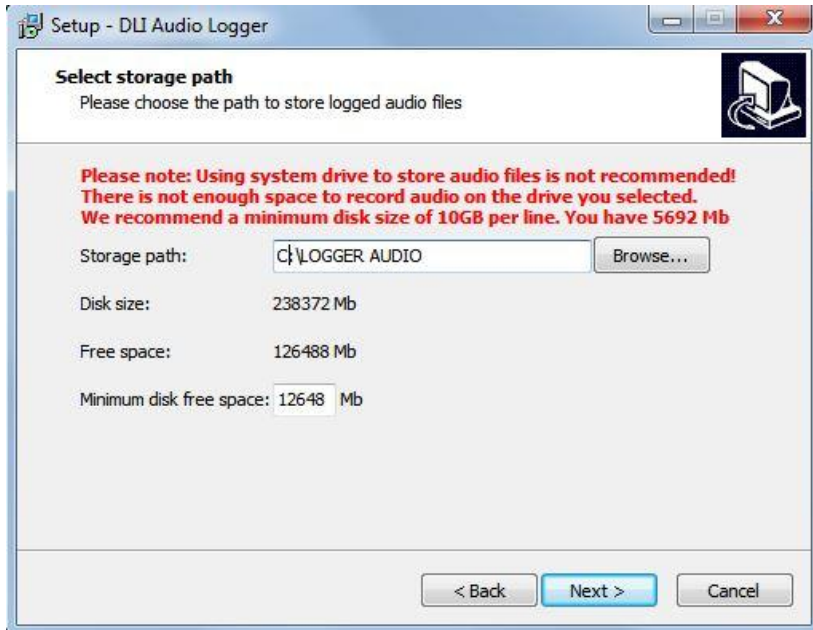

If more than one of the same model device is being installed in the same computer, set the number here.

While not absolutely necessary, we recommend installing the client software (selected by default) to allow you to configure and see the status of the logger.

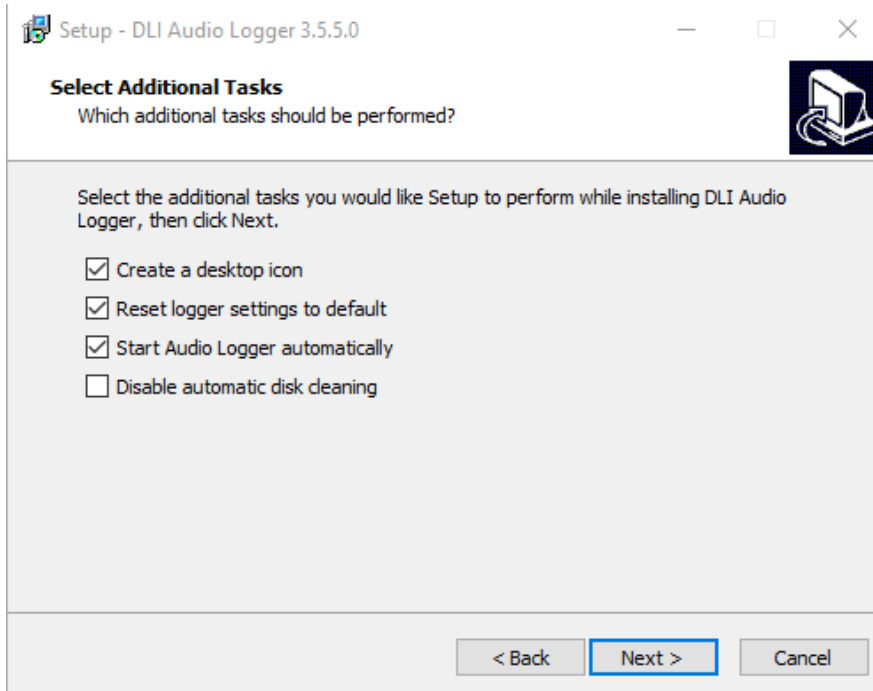

INSTALLING THE DLI LOGGER SERVICE VER. 3.7.x

Select the drive to where you would like the recordings stored. It is recommended to use a secondary drive for recordings of at least 10GB per channel, however it is not required. The warnings on the example above are simply recommendations.

If you are updating the version of recording software, it is normal to get a warning about the disk size or disk space. The software does not yet know that recordings already exist on the drive.

INSTALLING THE DLI LOGGER SERVICE VER. 3.7.x

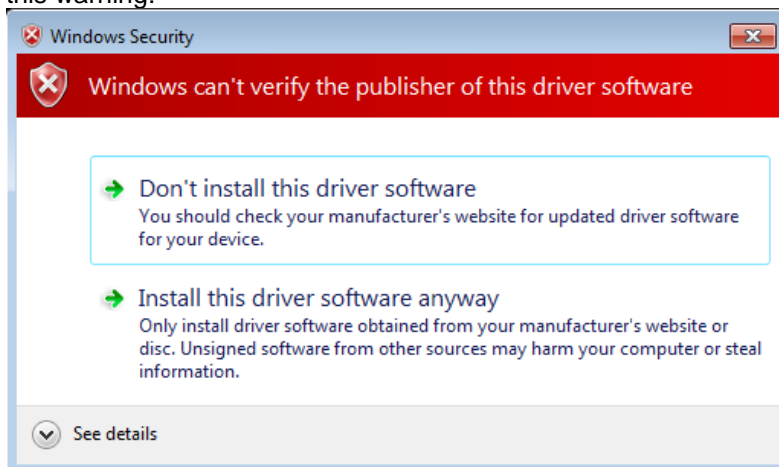

Reset logger settings to default: Any settings previously set will be overwritten with default settings. This must be checked for the first installation. If upgrading software version, leave this unchecked.

Create a desktop icon: This will create icons on the desktop for your convenience.

Start Audio Logger automatically: The logger will run immediately after installing and automatically when the computer starts.

Disable automatic disk cleaning: This disables the automatic purging of old recordings. You must manually ensure that the disk does not run out of space if this option is selected.

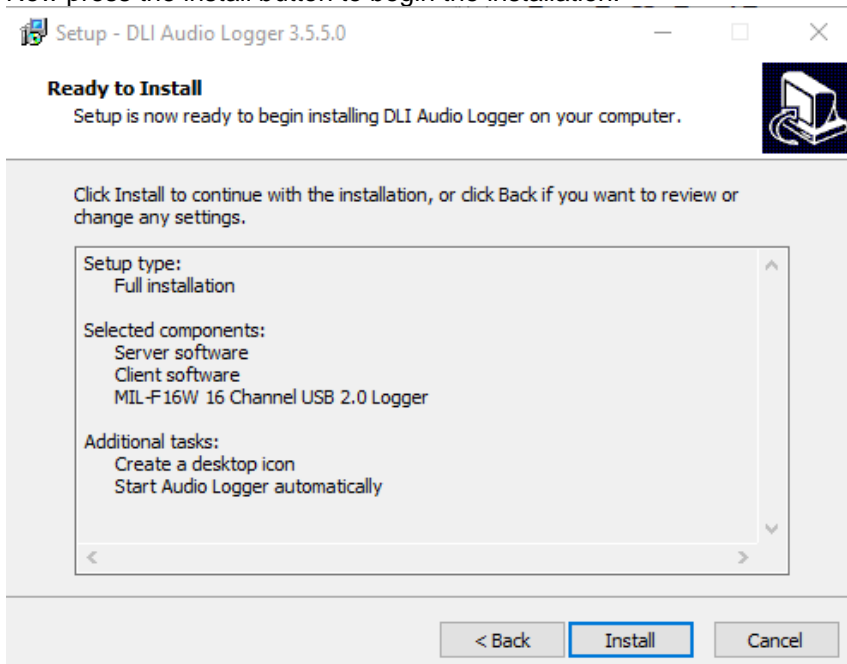

Some older operating systems such as Windows 7, Windows 8, Server 2008 or even Window 10 32-bit may show this warning:

Install the driver anyway.

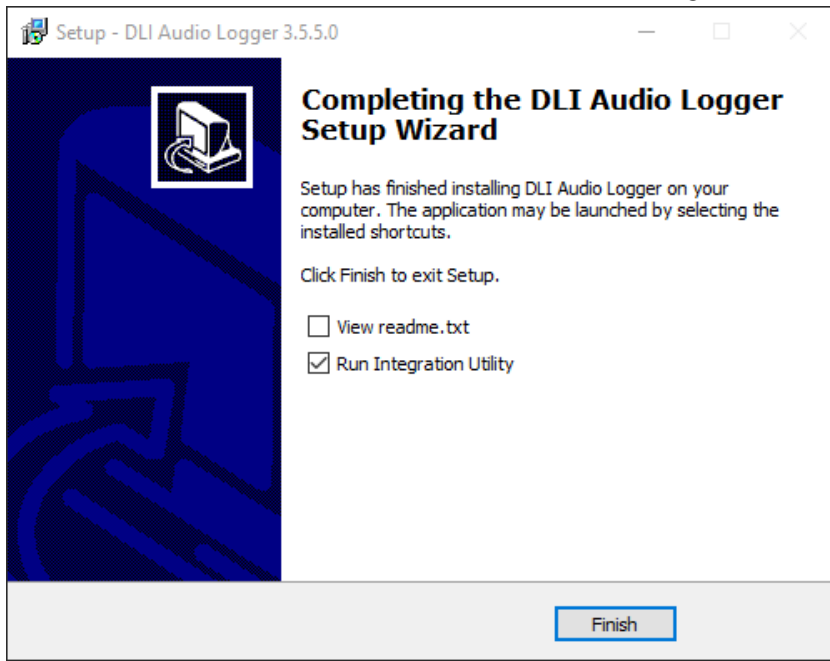

INSTALLING THE DLI LOGGER SERVICE VER. 3.7.x

Now press the install button to begin the installation.

After a time, you may be prompted to plug in and power on the device. This should go away quickly if the device is already powered on and connected.

INSTALLING THE DLI LOGGER SERVICE VER. 3.7.x

You may wish to start the DLI Service Manager and verify that the services are running. If not, start them by clicking the *Start All* button.

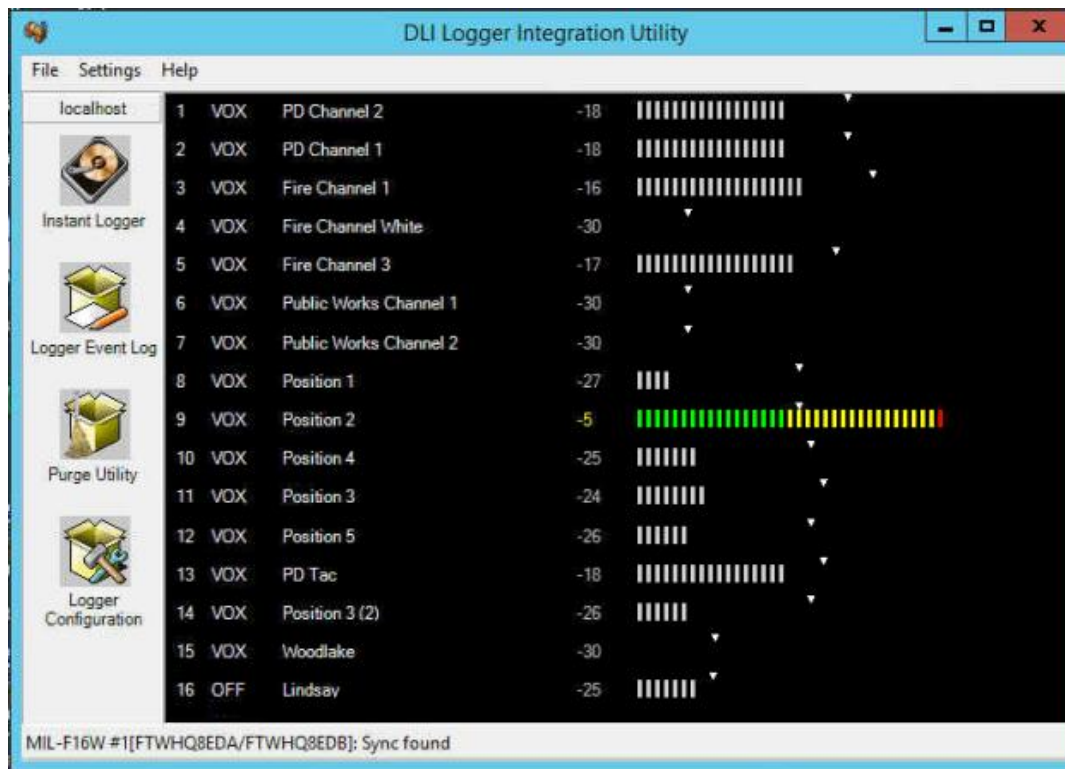

Verify that the Integration Utility shows that everything is ok.

Double-click on the icon to display the utility on the screen. Select the Logger Configuration icon on the left

INSTALLING THE DLI LOGGER SERVICE VER. 3.7.x

Adjusting when recording occurs - Manual VOX trigger level

Note the state of the channels. When the audio level bars are non-existent or not colored, no recording is occurring. If the bars are green, yellow or red, recording to a file is occurring. Be sure that the bars are not colored when no audio is present. If there are no bars, observe the color of the dBm number (the negative numbers to the left of the bar. E.g.: -30). If it is yellow, it is recording. If white, the channel is not recording. It is normal for there to be a delay in the screen and the coloring. This application runs at a lower priority than the services. Clicking on the line number will open Windows explorer to the recording directory if there are recordings.

Right-click on the “mode” to change the recording mode.
Click on the Line Name to change the name of the recording folder.
Using the mouse you can drag the VOX trigger level to the appropriate location.

On DLI Audio Loggers without automatic gain control such as the MIL-F8 and the MIL-F16, the volumes knobs on the unit (gain controls) and VOX trigger level in LoggerConfig will need to be adjusted. Adjust the audio level so that touch tones cause the recorder bars to go well into the red. Recording will continue and the bars will be colored after the last audio signal until the timeout has expired.

When the lines are quiet, set the VOX Trigger Level so that the recording is not triggered (white) but audio causes the recording to start. You may need to adjust the VOX Trigger Level again. Adjusting these levels correctly is required for proper Caller-ID and DTMF decoding.

With the FXX series of loggers, Complex Mode (CMP) may be used if the phone lines are wet lines. These lines will have 48VDC. Picking up the phone line or a noise (such as ringing) will trigger recording. This mode is recommended for wet lines. The VOX trigger level may be set a little higher since only ringing needs to be detected to start recording. Ringing must be recorded to decode caller-ID since the caller-ID is transmitted between the first and second rings.

INSTALLING THE DLI LOGGER SERVICE VER. 3.7.x

Trigger Mode summary

VOX - Voice Activated Recording. Detected audio starts recording. Recording continues until the timeout.

Disable (OFF) - Nothing will be recorded to this channel.

Complex (CMP) - Either low DC voltage detected **or** audio will trigger recording. (Normal on-hook voltage is 48VDC)

LoopStart (LPS) - Recording will occur while DC voltage is low. (Normal on-hook voltage is 48VDC)

Continuous (CNT) - Recording will always occur. Max file size is determined by the Minimum Call Length setting.

External (EXT) - Recording will occur when the relay is closed, telling the logger that the phone is off-hook. This requires a system that supports contact-closure. *Only 24 channel loggers support this feature.

Line Settings

Common Call Analysis Settings

Options	Default	Explanation
Enable Call Analysis	No	Yes, No
		Enable or disable decoding DTMF and Caller ID from the audio. This must be OFF for a T1-PRI

DTMF Settings

Options	Default	Explanation
DTMF Interdigit Delay	5.0	Do not change
DTMF Interval	30.0	Do not change
DTMF Start Interval	30.0	Do not change
DTMF Threshold	-7	-30 - -1
		The level at which audio will start decoding touch-toned (DTMF). Set too low (toward -30) can cause erroneous numbers/letters. Set too high and DTMF may not be decoded.

File Settings

Options	Default	Explanation
Allocated Days	1-9999	Number of days allocated for recording. No less that this number of days will be available in this channel. This is disabled until there is history.
Line Allocation (MB)	1-9999999999	Amount of storage reserved for this channel. The purge will never delete this amount of data.
Line Name	Any Legal Folder Name (up to 32 characters)	*Ignored if SimplePurge is selected in the system settings. (version 3.2.3.0 or later)
Pre-Record Time (seconds)	0-9	The name of the recording folder for the channel. All line names must be unique.
Storage Path	LocalPath	Linexx
Trim Silence	disabled, -30 to -1	0
		The number of seconds to pre-record.
		The Storage Path defined in Storage Paths settings.
		The level below which any audio will be deleted from the end of the recording.

Recording Settings

Options	Default	Explanation
Mode	VOX	VOX, Disable, Complex, LoopStart, Continuous
		VOX - Voice Activated Recording. Detected audio starts recording.
		Disable - Nothing will be recorded to this channel.
		Complex - Either low DC voltage or detected audio will trigger recording.
		LoopStart - Recording will occur while DC voltage is low.
		Continuous - Recording will always occur. Max file size is determine by the Minimum Call Length setting

INSTALLING THE DLI LOGGER SERVICE VER. 3.7.x

MIL-T1:

The lights on the logger will not flash green until the application is running and in synch.

MIL-T1 (Standard):

Decoding incoming Caller ID

Enable call analysis as indicated above

Section Editor - System Settings:

File Settings:

Set **Number Field Content on Incoming Call** to **DTMF**

Set **Number Field Content on Outgoing Call** to **Disable**

MIL-T1 (PRI-ISDN) NI-2:

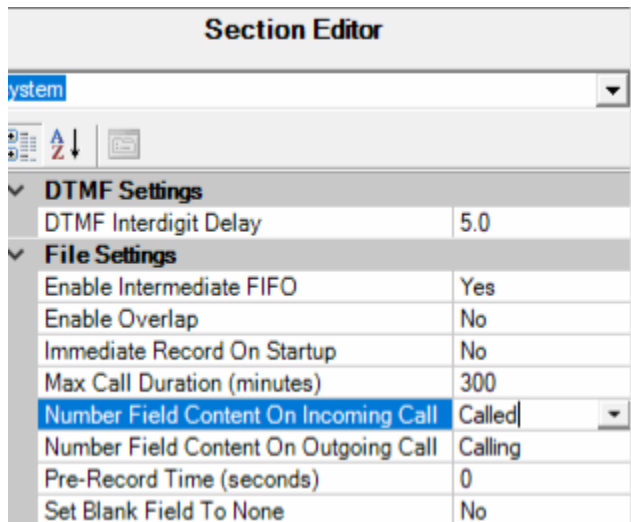

Decoding incoming DID (possible if the PRI signaling contains DID numbers)

Section Editor - System Settings:

File Settings:

Set **Number Field Content on Incoming Call** to **Called**

Set **Number Field Content on Outgoing Call** to **Calling**

Go to the Section Editor select USB2T1 from the drop-down list
In the Signaling Section, set **PRI VOX Mode** to **D_Channel**

INSTALLING THE DLI LOGGER SERVICE VER. 3.7.x

The screenshot shows the DLI Logger Integration Utility interface. On the left is a sidebar with icons for Instant Logger, Logger Event Log, Purge Utility, and Logger Configuration. The main window is divided into two panes: Summary Settings Table and Section Editor.

Summary Settings Table:

Section Name	Recording Mode	T1 Type	Combining Mode		
USB2T1	Combine	ISDNPRI	Or		
Device Type	Purge Interval	Minimum Disk Free Space	Logging Drive		
USB2T1	1	23847	C		
Line Name	Line Allo	MB/Day	Days	Usage	Mode
Line01	1829	0	0	0	vox
Line02	1829	1	1829	1 MB/Day (182	vox
Line03	1829	1	1829	1 MB/Day (182	vox
Line04	1829	0	0	0	vox
Line05	1829	0	0	0	vox
Line06	1829	1	1829	1 MB/Day (182	vox
Line07	1829	16	114	16 MB/Day (11	vox
Line08	1829	19	96	19 MB/Day (96	vox
Line09	1829	0	0	0	vox
Line10	1829	0	0	0	vox
Line11	1829	0	0	0	vox

Section Editor (Line01):

- Common Call Analysis Settings:** Enable Call Analysis: Yes
- File Settings:** Days: 0, Line Allocation (MB): 1829, Line Name: Line01, Storage Path: LocalPath, Trim Silence: disable
- Recording Settings:** Mode: VOX, Signaling Pattern: 11xx, Silence Byte: FF, VOX Timeout: 20

Buttons: Save, Reload. Logo: DLI DIGITAL LOGGERS, INC.

T1 SETTINGS:

The screenshot shows the DLI Logger Integration Utility interface with T1 settings. The Summary Settings Table and Section Editor are updated to show T1-specific configurations.

Summary Settings Table:

Section Name	Recording Mode	T1 Type	T1 VOX Mode
USB2T1	Combine	Standard	Signaling
Device Type	Number of Dev	Enable Postgr	Enable using V
usb2T1	1	No	No
Line Name	Line Allocation	MB/Day	Allocated Days

INSTALLING THE DLI LOGGER SERVICE VER. 3.7.x

T1-PRI SETTINGS:

T1 SETTINGS EXPLAINED:

USB2T1			
Internal Settings	Options	Default	Explanation
RecordingMode	Normal, Combine	Combine	Records both sides of conversation in the same presents record (Combine) or each side separately (Normal).
Signaling Settings	Options	Default	Explanation
T1 Type	Standard, ISDNPRI	Standard	This setting defines T1 signaling type. The possible types are: (Standard) - using T1 robbed bits and (ISDNPRI) starting recording when audio level is higher than predefined level (or D-Channel signaling).
PRI VOX Mode	TriggerLevel, Silence, Constant, D_Channel	TriggerLevel	Defines ISDNPRI signaling type. TriggerLevel: Records when audio level

INSTALLING THE DLI LOGGER SERVICE VER. 3.7.x

			exceeds the VOXTriggerLevel setting..
			Silence: Records when the signal differs from the value defined in SilenceByte setting.
			Constant: Records when the signal changes.
			D-Channel: Records when the connection is established by D-Channel PRI signaling.
T1 VOX Mode	Signaling, Signaling_and_Level	Signaling	Defines T1 signaling type: (Sign) Records when the T1 signaling bits combination appears.
			(Sign_and_Level) when T1 signaling bits combination appears or when audio level exceeds defined by VOXTriggerLevel setting.
Combining Mode	Or, And, East, West	Or	This setting defines how the east and west signaling are summed.
Silence Byte	00-FF	FF	This setting defines value of signal, which accepted as a silence for the Silence mode.
PRI Settings	Options	Default	Explanation
East ISDN Side	Network, User	Network	Type of side of PRI interface on the east T1 line.
West ISDN Side	Network, User	User	Type of side of PRI interface on the west T1 line
East D-Channel	1-24	24	D-Channel number on the east T1 line
West D-Channel	1-24	24	D-Channel number on the west T1 line.
EnableISDNTrace	Yes,No	No	Enable ISDN Trace.
ISDN Trace Directory Name	Any drive letter or *UNC path		Location where the ISDN trace is saved.
Interface ID	off,0-128	off	If enabled, set will record calls only with explicitly defined interface ID.
West Gain	-20-20	0	Add gain to west channels.
East Gain	-20-20	0	Add gain to east channels.
Log Inbound Calls	Yes,No	Yes	Enable to logging of inbound calls.
Log Outbound Calls	Yes,No	Yes	Enable to logging of outbound calls.
DID Filter Numbers	comma separated DID list	empty	List of DID numbers to record or not record when DID Filter Type is set.
DID Filter Type	Disable, RecordOnly, DoNotRecord	Disable	The DID filter excludes from recording calls with certain DID numbers.It may filter calls in two modes
			RecordOnly, Record a call only with defined in the DID Filter Numbers setting DID numbers
			DoNotRecord, Don't record the calls with the set DID numbers.
